ICIJ INTERNATIONAL CONSORTIUM
of INVESTIGATIVE JOURNALISTS

Journalists from De Tijd, Knack and Le Soir were part of the journalists researching the documents. Belgium appeared 365 times in the 2,100 leaked documents. The four major Belgian banks, ING, KBC, Belfius and BNP Paribas Fortis, were featured. In one case, half a billion dollars was transferred in one go from a Belgian bank account to a letterbox company in the British Virgin Islands. ING Belgium in particular turned out to be a pivot in the suspicious cash flows through its correspondent banking services and former branch office in Geneva. The bank appeared to be involved in almost half of the reports in which Belgium occurs.

Belgium appeared 365 times in the 2,100 leaked documents.

What...is a Cryptocurrency?

- Cryptocurrency (or Cryptoasset) are a type of virtual currency or alternative currency designed to work as a medium of exchange within certain communities.
- A cryptocurrency uses cryptography to secure transactions, control the creation of additional units, and verify the transfer of assets.
- Cryptocurrencies mainly use decentralised control
 - No single point of contact
 - No regulatory body
- The decentralised control of each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

Total value received by Eastern Asia from 2023-02 to 2024-01

Crypto economy country breakdown

Japan is the number 3 largest country in Eastern Asia, receiving \$53.48 B in total cryptocurrency transaction value between Feb 2023 and Jan 2024.

Total value received in Eastern Asia by country between 2023-02 and 2024-01

FATF[®] Definition of Virtual currencies/Cryptocurrencies

Financial Action Task Force definition:

“Virtual currency is a digital representation of value that can be digitally traded and functions as:

- (1) A medium of exchange; and/or
- (2) A unit of account; and/or
- (3) A store of value, but does not have legal tender status (i.e., when tendered to a creditor, is a valid and legal offer of payment) in any jurisdiction. It is not issued nor guaranteed by any jurisdiction, and fulfils the above functions only by agreement within the community of users of the virtual currency”

Key Points:

- Decentralized – No central agency to approach for information on users
- Peer to Peer – controlled by the invested community
- Issued through providing resources to the network – This helps to verify transactions and provide security.
- Value is based on supply & demand, the economic policy or desire to invest in the technology on offer.

In its most recent update to the guidance the FATF also defined some cryptocurrencies as “virtual assets” which they defined as: “A virtual asset is a digital representation of value that can be digitally traded, or transferred, and can be used for payment or investment purposes. Virtual assets do not include digital representations of fiat currencies, securities and other financial assets that are already covered elsewhere in the FATF Recommendations.”

Where... did they come from?

A brief history

- 1992 – Cypherpunks
- A cypherpunk is any activist advocating widespread use of strong cryptography and privacy-enhancing technologies as a route to social and political change.
- *“Privacy is necessary for an open society in the electronic age... We are defending our privacy with cryptography...and with electronic money”.*
(Eric Hughes, ‘A Cypherpunk Manifesto, 1993)

Where... did they come from?

Electronic money:

- 1) Conventient
- 2) Untraceable
- 3) Liberated from the oversight of governments and banks

How does a normal card payment work?

- 1 • I present my debit card at the hotel to pay my bill.
- 2 • The card reader communicates with the hotels bank via a merchant acquirer.
- 3 • The hotel's bank communicates with my bank via another merchant acquirer.
- 4 • My bank pays the hotel's bank via the second merchant acquirer.
- 5 • The hotel's bank confirms receipt of payment via the original merchant acquirer.
- Payment is approved by the hotel card reader.
- The transaction involves the hotel, two banks, and two merchant acquirer services.
- 5 • Fees are extracted by each bank and merchant acquirer and often the retailer.

How does a Bitcoin transaction operate?

- 1** • I present the app on my phone or other device to the retailer.
 - 2** • The retailer's Bitcoin app checks my Bitcoin wallet via the blockchain.
 - 3** • The Bitcoin is transferred from my wallet to the retailer's wallet via the blockchain.
- The transaction is recorded publicly on the blockchain.
 - The transaction involves me, the retailer and the Blockchain.
- 1** • No fees are extracted therefore, no one profits other than the retailer.

TRANSACTIONS

- In simple terms the transfer of bitcoin from one address to another. More precisely a transaction is a signed data structure expressing a transfer of value. Transactions are transmitted over the bitcoin network, controlled by miners, and included in blocks, made permanent on the blockchain.
- Each transaction has two sides, inputs and outputs.
- The inputs show the amount being sent and what sender address are involved.
- The outputs show the amount of bitcoin being credited and the recipients address.

inputs: 2 (0.00292888 BTC) unique addresses: 2, source transactions: 2	outputs: 2 (0.00291008 BTC) unique addresses: 2, spent: nothing
0. 1LmYcTgoxYCBN9iVjXtuJkUMMww3ZKTJdf 0.00252617 BTC prev. tx	0. 16KnJRPXbNu3aJraaMMX274k2VYGPoMDS (change address) 0.00039096 BTC unspent
1. 16KnJRPXbNu3aJraaMMX274k2VYGPoMDS 0.00040271 BTC prev. tx	1. 3BZWU6A4mK6neCte3U9qspmy6ZKJ5YHLrA  CoinPayments.net 0.00251912 BTC unspent

- Importantly the inputs and outputs do not necessarily add up to the same amount.
- This is because there is a fee to pay for including a transaction in a block. As outlined computational power and energy is consumed when a block is mined. The fee provides some compensation for those carrying out the mining activity.

MINING

- In the previous slide we have looked at the concept of a blockchain. This is the public ledger of all transactions which everyone in the Bitcoin network accepts as the authoritative record of ownership.
- How though can everyone agree on this record without having to trust anyone else?
- How can the record withstand attack from dishonest or malicious parties?

- Bitcoin looks to solve this by creating what is essentially a lottery in which the winner gets to include transactions in the ledger (blockchain).
- Importantly though the financial incentives of this process encourages honest behaviour from the participants.

- There is a cost to entering the lottery as generating the winning numbers is a random process which requires computer processing power. Generating this power costs the participants in electricity expended.

MINING

MINING

The University of Cambridge's online tool estimates Bitcoin's annual electricity consumption is more than The Netherlands, United Arab Emirates and Argentina

<https://digiconomist.net/bitcoin-energy-consumption>

MINING

- The winner of the lottery gets to mint a number of new bitcoins and claim the transaction fees (coinbase transaction) for the ledger entry they have created (a block).
- However they cannot claim this reward until a timelock has passed.
- In the meantime if any node rejects any of the transactions in the ledger entry (block) because the rules have not been followed the winner loses their reward.

- As a result of dishonest behaviour has serious economic costs for participants. Further to this the ongoing success of the network provides participants with the opportunity of long term rewards through the asset appreciating in value.
- Dishonest behaviour would have a high risk of undermining the value of the asset and reducing the long term opportunities through loss of confidence in the protocol.

- Participants are called miners, the lottery process is called mining and the concept behind it is proof of work. Miners can also be nodes on the network.

Ethereum's current energy expenditure with proof-of-work is too high and difficult to maintain. Solving energy expenditure without sacrificing security and decentralization is a major technical challenge and has been a focus of research and development for years.

A greener future for Ethereum is already being built in the form of a proof-of-stake (PoS) chain.

Save Planet Earth

PROOF OF STAKE

PROOF OF STAKE

Proof-of-Stake (PoS) is a consensus mechanism used in blockchain networks to achieve distributed consensus and validate transactions. In contrast to Proof-of-Work (PoW), which relies on miners solving complex mathematical problems to validate transactions and create new blocks, PoS operates on a different principle.

CONSENSUS MECHANISMS

Proof of Work

Many miners compete to solve a puzzle the fastest

Proof of Stake

A single validator is selected to process the transaction

PROOF OF STAKE

In a PoS system, validators, also known as "forgers" or "stakers," are chosen to create new blocks and validate transactions based on the amount of cryptocurrency they hold and are willing to "stake" as collateral. The more cryptocurrency a participant is willing to lock up as collateral, the higher the chances they have to be chosen as the next validator to create a new block.

Proof of Work

VS

Proof of Stake

High processing power required by miners to solve arbitrary puzzles to add a block.

Validators are randomly chosen on stake-basis and participate through simple devices

One needs to control at least 51% of the node to control transaction on the chain.

For 51% attack, one needs to own 51% of all cryptocurrencies on the chain.

The first miner to solve the problem gets cryptocurrency as the reward

Validators earn through chagrin transaction fee, no rewards for block validation

PROOF OF STAKE

Here are the key features of Proof-of-Stake:

1.Staking: Participants in the network are required to lock up a certain amount of cryptocurrency as collateral to become eligible for block validation.

2.Random Selection: Validators are chosen to create new blocks in a deterministic or pseudo-random manner, typically based on factors like the amount of cryptocurrency staked and the length of time it has been staked.

3.Security: PoS is designed to be more energy-efficient compared to PoW, as it doesn't involve the intensive computational work seen in mining. The security of the network is theoretically tied to the economic incentives of validators, as they have a stake in the network's well-being.

4.Block Validation: Validators take turns proposing and validating new blocks. If a validator acts maliciously, for example, by attempting to double-spend or validate fraudulent transactions, they risk losing their staked cryptocurrency.

Public key vs Private key!

A **public key** allows you to receive cryptocurrency transactions.

It's a cryptographic code that's paired to a private key.

While anyone can send transactions to the public key, you need the **private key** to “unlock” them and prove that you are the owner of the cryptocurrency received in the transaction.

Bitcoin Address	Private Key
	
SHARE	SECRET
17rD8fygKughV6jUW8PZDJQmiwvJQAkqoN	KwPnCP6TfN9czFWah6SagGRiXeMoMoPCWNEiMzZdXdq8UqJRkZbb

Custodial vs non-custodial wallets!

Custodial wallet

A custodial wallet is a wallet in which a third party (usually a crypto exchange) is responsible for managing your private keys.

Instead of having custodial access to your funds, a service provider gets complete control of your money. Users rely on custodial wallets because managing private keys is not an easy task.

Non-custodial wallet

A non-custodial wallet is a wallet in which you are responsible for storing and managing your private keys.

Instead of third parties like crypto exchanges having custodial access, you have full control over your digital assets.

Private key search

You can enter a Bitcoin or Ethereum private key below, if you are wondering where a wallet is located in the key space. Be aware that typing your private key on random websites is risky! This is a great tool for finding where already exposed keys are placed within the private key space.

We only support searching by private key and not by addresses or public keys, thus recovering a lost wallet is impossible. Private key formats are either WIF for Bitcoin, or 64-character hex for Ethereum.

How does it work?

People horrified by story of man who lost password to \$220m worth of bitcoin: 'Panic inducing to read'

Hundreds of people are commiserating with a man who has lost his password for accessing his 7,002 [bitcoin](#), worth about \$220m, and has just two attempts left before he is locked out forever.

Speaking to [The New York Times](#), Stefan Thomas, a German programmer living in California, revealed that he was gifted the bitcoin, which has fluctuated in value over the years before recently [surging](#), as a reward for making an animated video about bitcoin in 2011.

According to Thomas, he lost the password to his IronKey, an encrypted hard drive that holds the keys to his digital wallet, the same year.

Since then, Thomas told the outlet he has tried eight variations of his commonly used passwords in an attempt to gain access to his IronKey. Unfortunately, his chances are running out, as IronKey only allows users 10 attempts before it "seizes up and encrypts its contents forever," *The Times* notes.

Bitcoin is also unable to help, as it does not store passwords, but rather grants individuals who buy bitcoin a private key to their digital wallet - which only they have access to.

What...is a Cryptocurrency?

- Cryptocurrency (or Cryptoasset) are a type of virtual currency or alternative currency designed to work as a medium of exchange within certain communities.
- A cryptocurrency uses cryptography to secure transactions, control the creation of additional units, and verify the transfer of assets.
- Cryptocurrencies mainly use decentralised control
 - No single point of contact
 - No regulatory body
- The decentralised control of each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

Typology 4:

Binance (debit) Card

What can you do with a Binance Card?

The Binance Card is a Visa Card that you can use for payments worldwide, both online and at physical locations. This is a debit card, which means that you can only spend to the extent that your balance is sufficient. The card is released through the world's largest crypto trading platform: Binance. They have their own cryptocurrency, namely the Binance Coin (abbreviation: BNB).

Cashback:

The main advantage of the Binance Card is the cashback you get when you make payments with the card. The cashback depends on the amount of BNB (Binance's cryptocurrency) you have in your account.

Do you already have Bitcoin (BTC), Ethereum (ETH) or another crypto at Binance? Then it is also possible to pay directly from your pay-wallet. You do pay a small surcharge.

LET'S BREAK
OUT!

OECD International Academy for Tax Crime Investigation
Conducting Financial Investigations

How would you launder your dirty money, using crypto's?

Group 1 & 2: You've got 1.000.000.000,00 JPY in cash, the profits of you selling narcotics.

Group 3 & 4: You've got 1.000,000.000,00 JPY dirty money in a Swiss bank account, the results of tax crimes.

Benefits to criminals

- Accounts can't be frozen if identified

- Exchanges without KYC (know your customer)

- Limited law enforcement skillset

- Decentralised nature avoids reporting mechanisms

- Bitcoin ATM's and smurfing

Benefits to criminals

- Pseudo-anonymous nature of crypto
- Easy to carry and store
- Availability of additional layers of anonymity mixer/coinjoin

- Privacy coins
- Easy to move internationally
- Bitcoin traders – no central party

TAX EVASION

- There is certainly the potential for individuals to use cryptocurrency as a means of hiding assets to avoid paying tax. Enforcement agencies are behind the curve currently on how to tackle this issue. The IRS in the USA have taken to demanding records from exchanges to identify users. Others are still uncertain on what constitutes a taxable event and what doesn't.
- The main issue for agencies is identifying who owns cryptocurrency assets and what action they are taking with them. Protocols with a strong stance on privacy make this very difficult and savvy users could look to take advantage of this.
- The problem for users is turning assets into cryptocurrencies without leaving a trace for regulators. Recent research outlines “Large receipted sums are difficult to manage or spend anonymously , and cryptocurrencies still require infrastructure to manage and spend.” (RAND, 2019). This is corroborated by the detail above highlighting that exchanges are being pursued by enforcement agencies for user information.

Bitcoin mixing - Coinjoin

A (highly-simplified) view of what happens on a bitcoin mixer: enabling its users to break the link to the source of their bitcoins.

Used efficiently bitcoin mixing or “coinjoins” can break the audit trail and make it very difficult to attribute ownership of the assets. There is however a caveat to this, the user must know how to safeguard their privacy at each step of the process.

Who is or what is LAZARUS?

A **cybercrime** group made up of an unknown number of individuals run by the government of **North Korea**.

Why do they do what they do?

Funding North Korea's **nuclear weapons**.

How do they do what they do?

**WANTED
BY THE FBI**

JON CHANG HYOK

Conspiracy to Commit Wire Fraud and Bank Fraud; Conspiracy to Commit Computer-Related Fraud (Computer Intrusion)

DESCRIPTION

Aliases: Quan jiang, Alex jiang

Place of Birth: Democratic People's Republic of Korea (North Korea)

Eyes: Brown

Race: Asian

Hair: Black

Sex: Male

Languages: English, Korean, Mandarin Chinese

REMARKS

Jon is a North Korean citizen last known to be in North Korea. Jon has traveled to China in the past and has reported a date of birth in 1989.

CAUTION

Jon Chang Hyok is allegedly a state-sponsored North Korean hacker who is part of an alleged criminal conspiracy responsible for some of the costliest computer intrusions in history. These intrusions caused damage to computer systems of, and stole currency and virtual currency from, numerous victims.

Jon was alleged to be a participant in a wide-ranging criminal conspiracy undertaken by a group of hackers of the North Korean government's Reconnaissance General Bureau (RGB). The conspiracy comprised North Korean hacking groups that some private cybersecurity researchers have labeled the "Lazarus Group" and Advanced Persistent Threat 38 (APT38). For his part in the conspiracy, Jon is alleged to have been directly involved in the development and dissemination of malicious cryptocurrency applications targeting numerous cryptocurrency exchanges and other companies. On December 8, 2020, a federal arrest warrant was issued for Jon in the United States District Court, Central District of California, after he was charged with one count of conspiracy to commit wire fraud and bank fraud, and one count of conspiracy to commit computer fraud (computer intrusions).

If you have any information concerning this person, please contact your local FBI office or the nearest American Embassy or Consulate.

Field Office: Los Angeles

Cryptocurrency and illicit finances

MODUS OPERANDI OF LAZARUS?

1) The hackers infiltrated the Ronin Network.

Ronin is an EVM blockchain crafted for developers building games with player-owned economies (Ethereum Virtual Machine).

Validators, to approve transactions on the blockchain, are centralized in the Ronin Network.

2) The hackers shift the cryptocurrencies.

Several hours later, the hackers opened dozens anonymous accounts on Binance, the world's largest cryptocurrency exchange, enabling them to convert the stolen funds and obscure the money trail using coinmixers.

Crypto Tax Report

2012-2022

NOVEMBER 2023

PER E-MAIL: kurt.caestecker@minfin.fed.be

BETREFT : REGULARISATIE VAN INKOMSTEN UIT CRYPTOMUNTEN

Geachte heer Caestecker,

Wij verwijzen naar uw bericht dd. 16 oktober 2023.

Graag zouden wij u onderhavig dossier willen voorleggen, waarbij cliënt sinds 2012 heeft geïnvesteerd in cryptomunten en in verschillende jaren inkomsten heeft verkregen middels deze investeringen.

Cliënt consulteerde ons voor begeleiding bij de spontane fiscale rechtzetting van de meerwaarden en passieve inkomsten die hij heeft behaald ingevolge cryptobeleggingen.

Daarnaast liet cliënt zich gezien de complexiteit van de materie ondersteunen door een professioneel onderneming ComplyChain (<https://www.complychain.eu/>) die gespecialiseerd is de analyse van cryptotransacties (Bijlage 1 – Rapport Complychain).

In deze nota lichten wij u op gemotiveerde wijze toe hoe de inkomsten zijn verworven.

TAX LAWYERS

4. Vermogenssituatie ten tijde van de investering

18. De netto investering van 10.871,00 EUR vertegenwoordigde minder dan 20% (cfr. criterium gehanteerd door de rulingcommissie in kader van het normaal beheer) van het roerend vermogen van cliënt (d.w.z. zijn beschikbare middelen).

III. Besluit

56. Om te concluderen, licht cliënt hieronder de inkomsten toe die hij wenst te regulariseren.

Diverse inkomsten (33%)	
Meerwaarde	29.791.753,45 EUR

Roerende inkomsten	
Staking rewards 2013, 2014 en 2015 (25%)	13.319,67 EUR
Staking rewards 2016 (27%)	3.966,55 EUR
Staking rewards 2017, 2018, 2019, 2020, 2021 en 2022 (30%)	2.116.673,48 EUR

> 800.000 transactions!

Your countries combined received \$401 billion in estimated value between July '20 and June '21 (12 months)

Central, Northern & Western Europe's cryptocurrency value received by country

July '20 - June '21

DeFi protocols

Centralized services

Japan's largest category of activity was centralized exchanges, which received 54.8% of all activity between Feb 2023 and Jan 2024. That was smaller than Eastern Asia's 63.7% received by centralized exchanges and smaller than the 60.1% received globally. The second largest category in Japan was DeFi, which received 42.7%. This was larger than Eastern Asia's 32.9% received by DeFi between Feb 2023 and Jan 2024.

Category	Eastern Asia	 Japan	Global
Centralized exchange	63.7%	54.8%	60.1%
DeFi	32.9%	42.7%	36.7%
Other	2.9%	1.2%	2.5%
Risky	0.3%	1.1%	0.6%
Mining	0.2%	0.1%	0.1%
Illicit	0.0%	0.0%	0.0%

A stablecoin is a class of cryptocurrencies that attempt to offer price stability and are backed by a reserve asset.

Stablecoin has gained attraction as they attempt to offer the best of both worlds. The instant processing and security or privacy of payments of cryptocurrencies, and the volatility-free stable valuation of fiat currencies!

STABLECOINS

There are 2 types of stablecoins:

- Fiat collateralized stable coins maintain a fiat currency reserve (USDT, USDC)
- Crypto-collateralized stable coins are backed by other cryptocurrencies (DAI/ETH)

Decentralized Finance

DeFi

Decentralized finance (or "DeFi") is a financial ecosystem based on blockchain technology. It lets users buy and sell assets and financial services as a form of investment or financing without middlemen.

DeFi uses blockchain, which connects users without a central server and can transfer data and assets securely, under the users' own watch. Transactions are regulated under "smart contracts", computer programs that also use blockchain and run automatically when the parameters the parties set in advance are met.

They use blockchain to store and transfer digital assets and smart contracts to make sure the parties keep their end of the bargain.

Decentralized Finance

DeFi

What applications are there within DeFi?

Staking

Staking stands for: storing crypto coins in a wallet for a fixed period of time. By staking you earn a kind of interest that you get deposited in your wallet. The reward you earn from betting cryptocurrency depends on the length of time you hold it. The longer the betting time, the higher the return. It is similar to a fixed deposit in the traditional banking system that is rewarded at the end of the period with a defined interest rate, as stipulated in the contract.

Decentralized Finance

DeFi

What applications are there within DeFi?

Lending

Lending stands for (temporarily) lending your cryptocurrencies to a platform. This platform then grants loans to companies or private individuals, without the intervention of intermediaries. At the same time, the DeFi lending protocol makes it possible for anyone in the world, anywhere, to earn interest from crypto they lend.

WHAT IS A NFT?

OECD International Academy for Tax Crime Investigation

Conducting Financial Investigations

NFT'S EXPLAINED

NFT stands for 'non-fungible token'.

A NFT is a digital asset that links ownership to **unique physical or digital objects!**

Art

Real estate

Gaming

Limited Edition 'NFT Yourself Album' w/ additional Vinyl Album (physical copy)

Open Edition only available for purchase until March 19th, at 8pm EST

Purchasers of the 'NFT Yourself Album Edition' will receive:

- One full digital album download
- One Limited Edition Golden Eye Vinyl (physical copy)
- One NFT collectible album artwork

NFT collectible with all proceeds benefiting Live Nation's Crew Nation Fund.

Buy

Music

NFT'S EXPLAINED

NFTs are sold **online**, via cryptocurrencies, and are the **digital proof of ownership** of an item.

NFTs are recorded on the **blockchain**, which ensures that the asset is **unique**.

NFT-projecten: Bored Ape Yacht Club, Meebits,
Mutant Ape Yacht Club, RTFKT Clone X, Azuki

The **blockchain technology** ensures that the NFT cannot be changed or falsified. The registration on the **blockchain** is tied to a digital wallet. This crypto wallet contains a digital key with which you can prove that the NFT is your property.

NFT'S EXPLAINED

NFT'S EXPLAINED

Smart contracts:

A **smart contract** is a piece of a code with which certain information is stored on the **blockchain**.

Smart contract are supported by multiple blockchains like, Ethereum, Solana, Tezos, Binance Smart Chain, etc.

A **smart contract** regulates 2 actions:

- Verifying ownership;
- Ensure that it is possible to transfer the NFT.

The **smart contract** ensures that the transaction is only executed when the predefined conditions are met and verified.

How Do NFTs work |
Learn All About How Does an NFT Work

Voor NFT smart contracten wordt een ERC-721 of ERC 115 contract gebruikt.

NFT'S EXPLAINED

Smart contracts:

ERC20 Tokens

— *Simply explained* —

NFT'S EXPLAINED

NFT-transactions, just like bitcoin transactions, **are visible** on the **blockchain**. Because everything is registered on the **blockchain**, it is possible to trace which address the NFT has created, to which address the NFT was sent, who the current owner is, etc

NFT PLATFORMS

Artists can offer NFTs for sale on these platforms/markets.

Buyers can then search the platform and buy the item of their choice.

This is usually done by bidding!

OpenSea has processed more than 10 billion dollar in transactions since its launch in 2017.

Description

By **EtherCardsPlatform**
The Association is a collection of dynamic NFTs by the NBA and NBPA. Please read the NFT terms and conditions here:
<https://theassociationnft.com/nft-terms-and-conditions>

A crypto airdrop is a marketing tactic where developers of a specific blockchain project send free tokens to users. New projects use this strategy to promote themselves prior to the official launching date.

Startups use both crypto airdrops and NFT airdrops to create buzz. It also increases awareness about their non-fungible token (NFT) collection or cryptocurrency. Airdrops can also boost the price of a token if there is a lot of publicity.

The screenshot shows the OpenSea website interface. At the top, there are browser tabs for 'The Association NFT #20716' and 'Ethereum Transaction Hash'. The address bar shows the URL: <https://opensea.io/assets/ethereum/0xd7bea2b69c7a1015aadaa134e564eee6d34149c0/20716>. The OpenSea logo and navigation menu (Explore, Stats, Resources, Create) are visible. The main content area is titled 'Item Activity' and includes a filter dropdown set to 'Filter'. Below the filter are buttons for 'Sales', 'Transfers', and 'Clear All'. A table lists the activity:

Event	Price	From	To	Date
Sale	0,35	RarestNFTCollector	WhaleMfer	3 months ago
Transfer		RarestNFTCollector	WhaleMfer	3 months ago
Airdrop		NullAddress	RarestNFTCollector	3 months ago

Below the table is a section titled 'More From This Collection' showing four NFT thumbnails with titles: 'HYLAID', 'NT'LIKINA', 'UMINGA', and 'UMINGA'. The 'WhaleMfer' name in the 'To' column of the table is circled in green, as are the 'Sale', 'Transfer', and 'Airdrop' event icons.

NFT-PLATFORMEN

NFT AANSCHAFFEN

Ethereum is required to buy an NFT.

Create an account with Coinbase.com 

Validate/Link your bank account.

Transfer Euros to Coinbase (to buy NFT and pay transaction fees.)

Buy Ether(eum) on Coinbase.

Download and install Meta app.

Create an ETH address in Meta. Keep 12 keywords in a safe place.

Back to Coinbase.

Transfer ETH to your Meta wallet.

Open Meta wallet and initiate connection with OpenSea.

Now you can buy an NFT on OpenSea.

The World's First Real Estate NFT

TechCrunch Founder, Michael Arrington's Kyiv Apartment sold in world's first NFT Real Estate Auction!

NFT APPLICATIONS

Hello Kurt,

Thank you for your interest in Propy! Many agents around the country use the Propy Platform and they can assist you with your upcoming Home Buying transaction: whether is a traditional transaction or one that involves escrow for crypto payment, or an NFT transaction.

Please reply to this email and share with us what is your preferred location for the purchase, your budget, the timeline for the purchase and if you'd like a recommendation for an agent. This will help us to best address your needs.

We look forward to working together!

ilko@propy

Embark on Exciting Missions!

📘 Learn How Missions Work

🕒 Missions

Embark on exciting and rewarding Missions!

<https://famousfoxes.com/missions>

Missions are a gamified form of Staking, requiring specific Fox traits, Levels, Dens, and sometimes even NFTs from other collections (previous collabs include DeGods, Jambo Mambo, and more!). Missions are 6 days in duration, and are more rewarding than Staking alone. You cannot end a Mission early.

Note: Sending Foxes on Missions still qualifies them as "Staking" for any utilities.

Famous Foxes and Transdimensional Foxes are both able to participate in missions and are both eligible for the same rewards, other than TFF's reduced XP.

Some missions also require **Dens** to complete them. Dens don't get XP however you get more FAME for that mission.

Every Sunday new missions are available to participate in and are announced a few days in advance on our [discord server](#). Missions can require **single or multiple foxes**. Every mission will **add XP** to your Foxes. This will be used to calculate the **level** of your foxes.

TFFs will earn XP **4 times slower** than FFFs.

Tier 1 Foxes (Level 40+) will receive an **extra 25% increased fame** for every mission completed.

You can check your Foxes levels [here](#).

Additionally, you may install the Official Chrome Browser Extension to view the FAME Levels and available Missions for Foxes listed for sale on Magic Eden!

NFTs and Money Laundering

WASH TRADING

A wash trader would buy and sell their own NFT so that it will show inflated volume and interest and possibly a price increase. (The wash trader controls both the buy and sell prices so they can buy it at a higher price from themselves.) This behavior can be repeated over and over.

As a result, outsiders seeing this increased activity might consider buying the NFT at an inflated price. Once the NFT is sold to an outsider, the NFT creator pockets the difference.

Advertising and Marketing

In the context of advertising and marketing, the metaverse can be defined as an enduring, 3D and virtual space where users can spend their time and be targeted with branded content and sales promotion tactics. The closest analogy these days would be social media, where users log in, interact with their friends, family, and peer network — and in the course of these interactions, they come across brands, ads, sponsored content, and calls for conversion. Over time, social media has evolved with direct-to-customer stores where you can pay for products online and have them shipped to your address. Likewise, the metaverse may have 3D "stores" where you can not only watch ads, but also try out products and make purchasing decisions.

EUROPOL

INNOVATION LAB

LAW ENFORCEMENT AND THE METaverse

IDENTITY THEFT

As the virtual representation of users in the metaverse becomes more realistic and permanent, this provides opportunities to convincingly copy user appearance (so called deepfakes).

With more advanced ways to interact with the system by using different sensors, eye tracking, face tracking and haptics for instance, there will be far more detailed biometric information about individual users. That information will allow criminals to even more convincingly impersonate and steal someone's identity. Moreover, this information may be used to manipulate users in a far more nuanced, but far more effective way than is possible at present on the internet

AI can be used to process what you are looking at, how you feel, or how you interact with people, and can this be used to influence people, This is, of course, an issue on the internet in general already, but metaverse applications, because of the significant increase in the amount of valuable biometric information it can gather, will present vastly more problems in this regard.

LAW ENFORCEMENT AND THE METaverse

IDENTITY THEFT

A person's identity is defined by more than the appearance or avatar the user has. A user generates data through interactions with the platform. That data may become so detailed it may feel like a very accurate representation of the user's identity.

Criminals have already been selling digital fingerprints on the dark web, which imitates the user's device's characteristics and behaviour

This makes a very strong identification, or know your customer (KYC), procedure very important for metaverse platforms, in order to prevent identity theft and provide trust between users, as well as provide law enforcement with the means to investigate crimes committed on the platform.

The question will be how the platforms handle this kind of data, in what ways is it processed and stored, and what safeguards are implemented to prevent the harvesting of this information by third parties. It will remain to be seen how well the implementation of these platforms conform to the GDPR.

Criminals may also impersonate brands as well as people.

LAW ENFORCEMENT AND THE METAVERSE

HARASSEMENT AND (CHILD) ABUSE AND EXPLOITATION

Harassment on the internet is already a significant issue, with as many as 58% of girls in an international 2020 Plan International survey having experienced online harassment.

In 2007, one avatar in Second Life allegedly raped another. A number of internet users initially dismissed the incident as nothing more than digital fiction, but police in Belgium opened an investigation.

Within 90 seconds after joining Meta's venues girls are being sexual harassed.

TERRORISM

With more immersive technology and related generated data at their disposal, terrorists can more easily select and target vulnerable people and tailor their messages to their biases. They can effectively target their propaganda and recruit people.

LAW ENFORCEMENT AND THE METAVERSE

TERRORISM

As an increasingly accurate and complete digital twin of reality becomes available, this may provide real-time information on planned targets.

The metaverse may allow users to create a virtual world as they envision the world should be, enabling them to create a virtual Caliphate or white supremacist state for example.

For context, Nazi gas chambers have already been reported in Roblox.

AND SO ON...

A LAW ENFORCEMENT PERSPECTIVE

Use Cases, Crime, Forensics, Investigation, and Governance

OECD International Academy for Tax Crime Investigation

Conducting Financial Investigations

Typology of crimes in the Metaverse.

INTERPOL

Crimes in the Metaverse

Typology of crimes in the Metaverse.

INTERPOL

Financial fraud

Various financial fraud can be committed through hacking, social engineering, virtual identity theft, etc.

Money laundering

Criminals may buy digital assets such as NFTs or virtual currencies with proceeds of crime and sell them for clean assets, restricting the capacity to trace the money's origin source.

Tax crime

Criminals may establish unclear ownership structures on digital assets to obscure their illegal activities and evade financial trace and taxes.

Introducing DopeWarz

Combining the entertaining and addictive nature of *being a gangster for a day*, with the ability to earn real world tradeable assets, DopeWarz plans to become a metaverse with an in-game virtual economy mimicing the supply and demand models in cities around the world.

Play 2 Earn

The in game economy will allow players to earn \$DDZ (DirtyDollarz) for drug trades and convert player's time investment into upgrades to player's DOPEZ & DOZ which will be tradeable on our Black Market as NFT's on the Binance Smart Chain. Launder \$DDZ into our governance and utility token \$DWZ and use it to further upgrade gameplay or even buy BLOCKZ to earn passive income and influence the government.

Gameplay

The game will focus on the virtual economy. The Company are developing mechanics to effectively create dynamic supply and demand models for the in game Drugz. Dopez will be able to make trades, evade Police, and travel to other Cityz to make more deals.

HIGHER LIFE CBD DISPENSARY

Welcome to the Future of Ecommerce

Higher Life CBD welcomes you to the world's first dispensaries on the Ethereum blockchain. Our metaverse dispensary offers you an immersive, gamified shopping experience, all within the virtual realm.

We offer everyone a unique opportunity to access 100% organic, all-natural, and high-quality CBD products anywhere in the United States. Our virtual dispensary is designed to create an enjoyable shopping experience where you can browse through our collection, purchase CBD products online, and physically receive your order right at your doorstep.

By breaking geographic barriers, Higher Life CBD has been featured in Forbes, The Wall Street Journal, High Times Magazines, Fox, USA Today, LA Weekly, Herb, Benzinga, and Yahoo Finance.

Conducting Financial Investigations

Group 1 & 2: During a house search you find a hardware crypto wallet. What are the steps you are going to take? What are the problems you expect to have, if any.

Group 3 & 4: During a house search you find a crypto wallet on your target's phone. What are you the steps you are going to take? What are the problems you expect to have, if any.

Asset Recovery

COURT HEARING

led to notify _____, to the Sheriff of _____
ing in the case of _____ Court No. _____ COUNTY
, 20 _____ County

CONSIDERATIONS PRIOR TO SCENE ATTENDANCE

- **WHAT INTELLIGENCE HAS BEEN RECEIVED INDICATING THE SUSPECTS INVOLVEMENT IN POSSESSION/USE OF CRYPTOCURRENCY?**
- **HOW IS CRYPTOCURRENCY USED IN THE CRIMINAL ACTIVITY IDENTIFIED? WHAT POTENTIAL INSIGHTS DOES THIS PROVIDE ON HOW CRYPTOCURRENCY WILL BE STORED BY THE SUSPECT?**
- **WHAT SECURITY MEASURES MAY THE SUSPECT HAVE PUT IN PLACE? WHAT OPPORTUNITIES ARE THERE TO OVERCOME THESE?**
- **HOW WILL WE AIM TO IDENTIFY CRYPTOCURRENCY ASSETS HELD BY THE SUSPECT?**
 - E.G. COMPUTER EXAMINATIONS, MOBILE PHONE SEIZURE, SEARCHES FOR RECOVERY SEEDS AND HARDWARE WALLETS**
- **WHAT TOOLS AND PROCESSES WILL BE USED TO CONFIRM WHAT ASSETS ARE HELD BY THE SUSPECT?**
 - E.G. SEARCHES OF ADDRESSES ON WEBSITES, USING RECOVERY SEEDS, OPENING WALLET SOFTWARE ON DEVICES.**
- **WHAT EQUIPMENT IS NEEDED TO SUCCESSFULLY COMPLETE A SEIZURE IN THE CIRCUMSTANCES?**
- **CAN WE GUARANTEE ACCESS TO THE INTERNET?**

YES

Is asset at risk of dispersal?

NO

Document reasons why risk is present

Identify storage mechanism for asset

Does the asset need to be transferred into police custody? What legislative power is required to do this?

Move to seizure work flow

Document rationale, current value in fiat and number of tokens, class of asset, transaction history and addresses related to assets

If privacy related token look to export private view key to facilitate the above

Complete a statement above and inform Financial Investigators

Seizure at scene of physical entity containing keys to cryptocurrency assets.

1. Seize the medium containing the private key/recovery seed. This can be paper wallets, hardware wallets, written records of recovery seeds etc.

2. Seize the passwords/codes related to wallets. Consider any 2FA devices which might be required

3. If any public keys/asset addresses are visible check for values on a block explorer. Record these and any transaction history displayed.

4. When placing passwords/codes, paper wallets and private keys/recovery seeds in exhibit bags ensure they have been placed in an envelope first. This envelope should be sealed at this point.

5. Exhibits should be brought to a safe place such as a virtual currency safe at a secure location as soon as possible.

Inform Financial Investigators of seizure

VIRTUAL CURRENCY SEIZURE

HM Revenue
& Customs

POINTS TO CONSIDER

It will not always be necessary or advantageous to seize the cryptocurrency asset. It might be of such limited value that it does not seem appropriate to seize. Alternatively we may feel other actions we have taken has sufficiently secured the asset. This is a discretionary decision for the individual completing the process. However it is important on each occasion to provide a clear policy log detailed the rationale for decisions made.

It is necessary on ever occasion to fully record the transaction history, addresses linked to the wallet and amount of cryptocurrency remaining. The matter can then be discussed with FI's at a later point to identify if there are any proceeds of crime opportunities over historic values or holdings of the asset etc.

Some wallet applications may have different transaction histories, transparent and shielded. Always check for this. It's possible that hardware wallets will have hidden accounts on them. These usually have a 25 word recovery seed. Check the scene for anything of this nature to help identify this.

POINTS TO CONSIDER

- **PLANNING AN INVESTIGATION STRATEGY IS AN IMPORTANT PART OF EFFECTIVELY INVESTIGATING SUCH OFFENCES. AS THE SAYING GOES FAIL TO PREPARE, PREPARE TO FAIL!**
- **THIS EXERCISE SHOWS HOW BLOCKCHAIN ANALYSIS IS NOT A SIMPLE SUBJECT. THERE IS A LOT OF NUANCE AND IT IS NOT A QUICK ENQUIRY. THIS IS WHY IT IS IMPORTANT TO HAVE A PROCESS THAT ALLOWS YOU TO REVISIT INFORMATION AND SPEND TIME ANALYSING IT. THE INVESTIGATION STRATEGY ALSO NEEDS TO RECOGNISE THIS AND SEEK TO EXPLORE EVERY OPTION AVAILABLE TO PROGRESS THE CASE.**
- **IT ALSO SHOWS HOW QUICKLY YOU COULD GET LOST AS ANALYSING OVER 4,000 TRANSACTIONS IS NOT EASY! THIS IS WHY PARAMETERS ARE IMPORTANT. ALSO IDENTIFYING TECHNOLOGY WHICH CAN HELP WITH ANALYSIS IS KEY TO GETTING THE BEST EVIDENCE OUT OF SUCH ENQUIRIES.**
- **THERE ARE POSITIVES IN COMPLETING BLOCKCHAIN ANALYSIS IF IT CAN BE MANAGED EFFECTIVELY. IT CAN HELP WITH IDENTIFYING SIGNIFICANT EVIDENCE FOR MONEY LAUNDERING INVESTIGATIONS. WE CAN TELL HOW MUCH HAS GONE TO AN ACCOUNT, HOW REGULAR ACTIVITY HAS BEEN, WE CAN USE DATES/TIMES TO COMPARE AGAINST OTHER RELEVANT INFORMATION E.G. TIMES OF OFFENCE OR BANK STATEMENTS.**

CRYPTO & ASSET RECOVERY

CRYPTO & ASSET RECOVERY

Central Agency for Seizure and Confiscation

Speed is of the essence!

If the suspect or third parties have a copy of the private key, they can quickly transfer the crypto.

When using a crypto platform: freeze funds so that the suspect can no longer carry out a transfer.

The seizure completed only after mandatory transfer of the crypto by the police to the public address of Central Agency for Seizure and Confiscation!

Thank u
