Product description

en-us/

Struvite (magnesium ammonium phosphate) is a mineral with a high content of phosphate and magnesium and nitrogen. Struvite is extracted in the potato processing industry when cleaning waste water. The struvite obtained in a sustainable way can be used as a natural fertilizer with an NPK ratio of 2-12-0.4 or as a raw material for artificial fertilizer or for the phosphate processing industry.

Product specifications

	Value		Value		Value		Value
Dry matter	38,0 %	Organic material	342,0 g/kgdm	Phosphate	316,0 g/kgdm	Potassium	8,8 g/kgdm
Crude ashes	658,0 g/kgdm	Phosphor	138,0 g/kgdm	Nitrogen	55,0 g/kgdm	Sulfur	3,0 g/kgdm

The above data are average values per kg dry matter and average percentages of the total. Subject to changes in product composition
