

# Extreema<sup>®</sup>

LIFTING YOUR WORLD

## The Black Belt Sling<sup>™</sup>

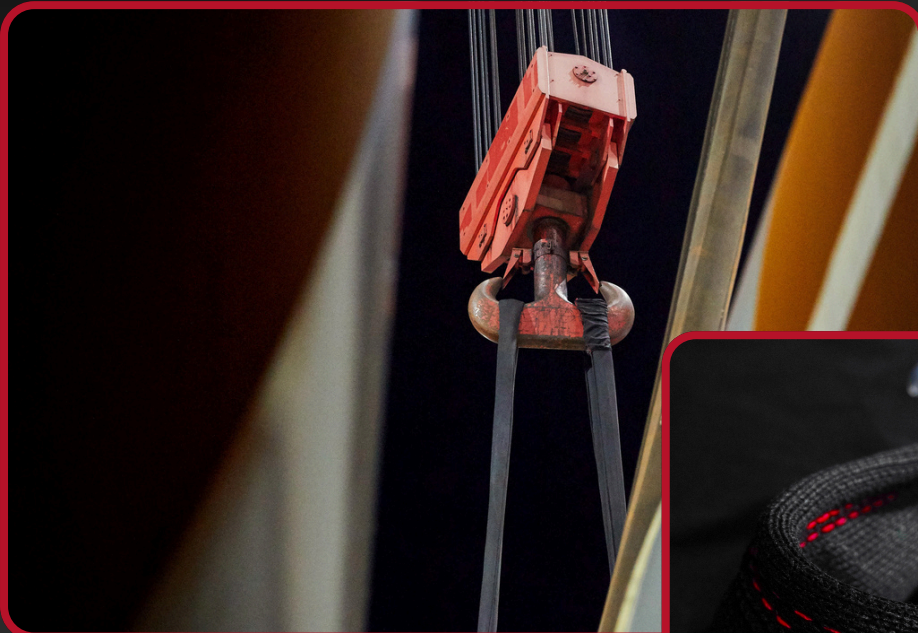

## **The Black Belt Sling**

The black sleeve, coated in our factory for enhanced performance, is made from Cordura® and is known for resisting abrasions, tears, and scuffs. The knitted jacket is also repairable, making it an ideal choice for many connecting challenges to shackles, shaves, trunnions, crane hooks, and more

### **Core**

The load-bearing core is based on parallel-laid fiber technology, made with either Dyneema® or HMPE, to ensure optimal performance.

Nowadays, Extreema® HMPE soft slings have an extensive track record and strong footprint in the heavy lift industry worldwide. Research, testing, and development in our factory, in close collaboration with our suppliers, have resulted in a huge step forward in our Extreema® soft slings product range.

# "Black Belt Sling: For the real heavy lifts"

**Repairable sleeve**

**Abrasion, tearing  
and scuff resistant**

**High pressure  
resistant**

## **Sustainability**

The Extreema® Black Belt Sling™ offers a significant advantage in terms of sustainability. By handling it with care, these slings can be utilized repeatedly for upcoming ventures, presenting an excellent option for individuals who wish to minimize their environmental impact.

## **Protection**

To ensure optimal sling performance, we highly recommend using suitable protection. Specifically, for the Black Belt Sling™, we suggest utilizing EP-C protection.

This high-quality protection boasts exceptional durability and stretchability, safeguarding your payload from any potential harm caused by friction or abrasion.
