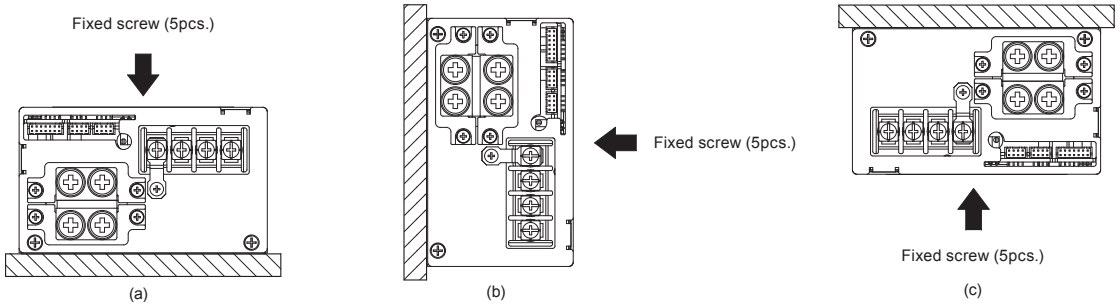
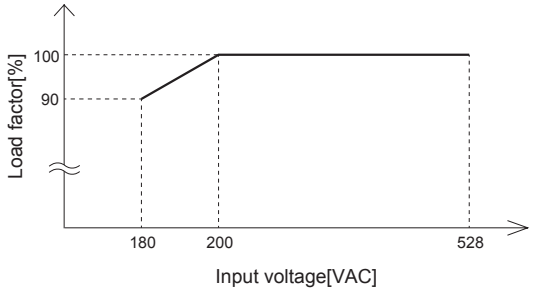
Assembling and Installation Method

■Use with the conduction cooling (e.g. heat dissipation from the aluminum base plate to the attached water-cooled plate).
■Recommended screw is M4. Select a screw length that allows the effective thread to be fastened to the water-cooled plate at least 4 mm.
■The recommended torque for the mounting screws is 0.94－1.25Nm (when the male screw is iron and the water-cooled plate is aluminum or copper).
■The aluminum base plate should be cooled uniformly.
■Use TIM (Thermal interface material) between the aluminum base plate and the water-cooled plate.
It is recommended to use TIM with a thermal conductivity of 1 W/mK or more.
■The unit can be mounted in any direction. When two or more power supplies are used side by side, position them with proper intervals to allow enough air ventilation. Aluminum base plate temperature of each power supply should not exceed the temperature range shown in "Derating".



Derating

● Derating curve depends on Input voltage



● Derating curve depends on Output voltage

■The unit should be used by the conduction cooling such as the water-cooled plate.
■The temperature of both points A and B has to be within the derating curve.
■Ambient temperature must keep between -10℃ and 70℃.
