

# Attunity: Your Data Integration Solution for Modern Pipelines

The ground is shifting under the feet of enterprise analytics teams as data lake, streaming and cloud platforms disrupt traditional data warehouse, batch and on-premises systems. You need to modernize your data pipelines for advanced analytics.

Attunity enables you to achieve this with modern data integration software. Half the Fortune 100 and more than 2,000 organizations globally, including Ford, Cardinal Health and Swiss Life, depend on us to deliver data and metadata in real-time across their dynamic infrastructures.

Our universal data integration solutions enable you to automatically and non-disruptively replicate live transaction data from production sources such as Oracle, mainframe and SAP to any major target – database, data warehouse, data lake and streaming platforms, on premises or in the cloud. We also automate the creation and updates of data lake and data warehouse structures to accelerate transformation. The result: immediate production data availability for analytics.

*Here is why CIOs and architects trust Attunity.*

## #1 in Change Data Capture (CDC):

We are the largest independent provider of real-time CDC data transfer technology, with the broadest support, highest performance and lowest impact

## #1 in Cloud Migrations:

We have moved more than 75,000 databases to AWS and other cloud platforms

## #1 for Ease of Use:

We eliminate scripting and reduce dependency on developers by applying a consistent, 100% automated process to any replication source or target

## Data Integration

The Attunity portfolio starts with a simple, universal and real-time data integration platform based on industry-leading CDC. We enable architects and database administrators to

eliminate manual coding with a 100% automated interface that quickly configures, controls and monitors data replication, with zero footprint on production systems. You can synchronize data across hundreds or thousands of systems – including any major RDBMS, legacy, data warehouse, data lake or streaming platform – through one pane of glass.

## Data Transformation

Attunity software further reduces the time and effort of Big Data analytics by automating the creation and updates of data lake stores, as well

as the transformation of enterprise data within them. Our solution enables you to continuously feed Operational Data Stores (ODS) for real-time views, as well as Historical Data Stores (HDS) that track all data and metadata changes.

We also speed analytics projects by automating the design, implementation and updates of data warehouse environments. Our solution will minimize the manual, error-prone scripting processes involved in data modeling, ETL generation and workflow. You can easily adapt to new requirements by auto-propagating source or model changes through the data warehouse environment.

## QUICK FACTS

- ▣ Headquarters: Burlington, MA
- ▣ NASDAQ: ATUU
- ▣ 2017 Revenue: \$62M
- ▣ 29% CAGR since 2010
- ▣ Challenger in Gartner Data Integration Magic Quadrant

### High Scale Data Pipeline Management

We further enable efficient, high scale analytics pipelines by automating the process of configuring, executing and tracking data flows.

Our solution provides a centralized platform and intuitive graphical interface to manage replication at scale, potentially spanning hundreds of end points.

Finally, Attunity users can better understand, access and trust their data by integrating and tracking metadata. Our unified repository provides end-to-end lineage views of sources, targets, replication and transformation processes. We also have taken a leading role in industry initiatives such as ODPi to simplify Big Data ecosystems with enterprise-wide discovery and reporting. This includes certified support for the Apache Atlas data governance framework for Hadoop.

Contact us today to learn how we can accelerate your analytics readiness.

### DECADES OF TRUSTED PARTNERSHIPS

Preferred partner status; 3 OEMs; bundled inside SQL Server

Preferred status; strategic partnership for cloud database migration

Data lake solutions

Certified solution with more than 200 SAP customers

OEMs of Attunity technology

Resellers for data warehouse and analytics

Global system integrator partnerships

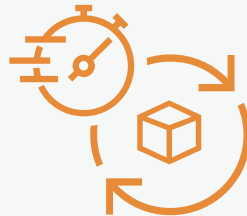

### THE ATTUNITY SOLUTION

#### ATTUNITY REPLICATE

Automated, universal and real-time data delivery

#### ATTUNITY COMPOSE

Fast creation and updates of analytics-ready data structures

#### ATTUNITY ENTERPRISE MANAGER

Intelligent management, metadata and control
