

# Virtualization **Built for CISOs,** Loved by Employees

Your Isolated Workspace Is Just One Swipe Away

## User Experience Simplified, **Security Fortified.**

Don't let your employees lose their time and focus juggling between different PCs.

With a single swipe, KERYS Software switches your interface and reconnects all the peripherals.

No lag. No residue. Just clean and secure flow.

## Off-line Ready, **Always Secure.**

VDI and DaaS break the moment the network does. And when users can't connect, they improvise : Local Saves, USB keys, Shadow IT...

KERYS Software flips the script. Everything runs locally. Even offline, no excuses.

## Designed for **the Messy Reality of IT.**

Developers push. IT bends. Full admin rights get handed out just to keep things moving.

With KERYS Software, each environment runs in its own domain, with strict, tailored boundaries : Device control, network policies, clipboard.

Just clean enclaves. No blind spots.
